

Houston 311 Infrastructure Service Burden

Council-district service burden index using Houston 311 infrastructure requests, April-June 2025

At a Glance

82,743

Records

District C

Top district

15.5%

Open share

Analytical Score

Higher scores mean heavier observed 311 infrastructure burden.

The score combines request density, median resolution time, unresolved share, long-resolution share, and repeat-location share. It is not an official City performance measure.

Legend

- Low (<25)
- Medium (25-49)
- High (50-74)
- Very High (75+)

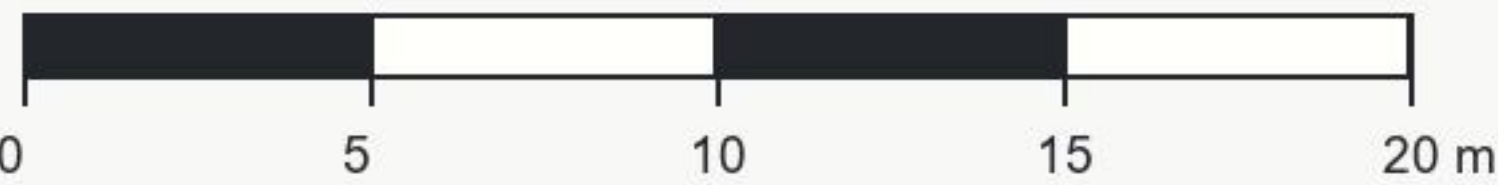

Top Drivers

1	District C	339/sq mi 16% open 48% repeat Leading category: Solid Waste	80.5
2	District H	223/sq mi 18% open 41% repeat Leading category: Solid Waste	78.6
3	District D	184/sq mi 13% open 43% repeat Leading category: Solid Waste	65.9
4	District B	88/sq mi 20% open 42% repeat Leading category: Solid Waste	60.9
5	District I	158/sq mi 13% open 41% repeat Leading category: Solid Waste	55.0

Data Quality Note

District assignments use point-in-polygon against official council boundaries. The data-quality table reports coordinate completeness and source-vs-spatial district agreement.

Scale (approx.)

Approximate because this plate uses a static image frame.

Sources

City of Houston 311 Archive; COHGIS / Harris County council district polygons; H-GAC major roads and rivers; 2024 ACS supported when API access is available.

Analytical screening product; not an official City of Houston performance measure.

Limitations

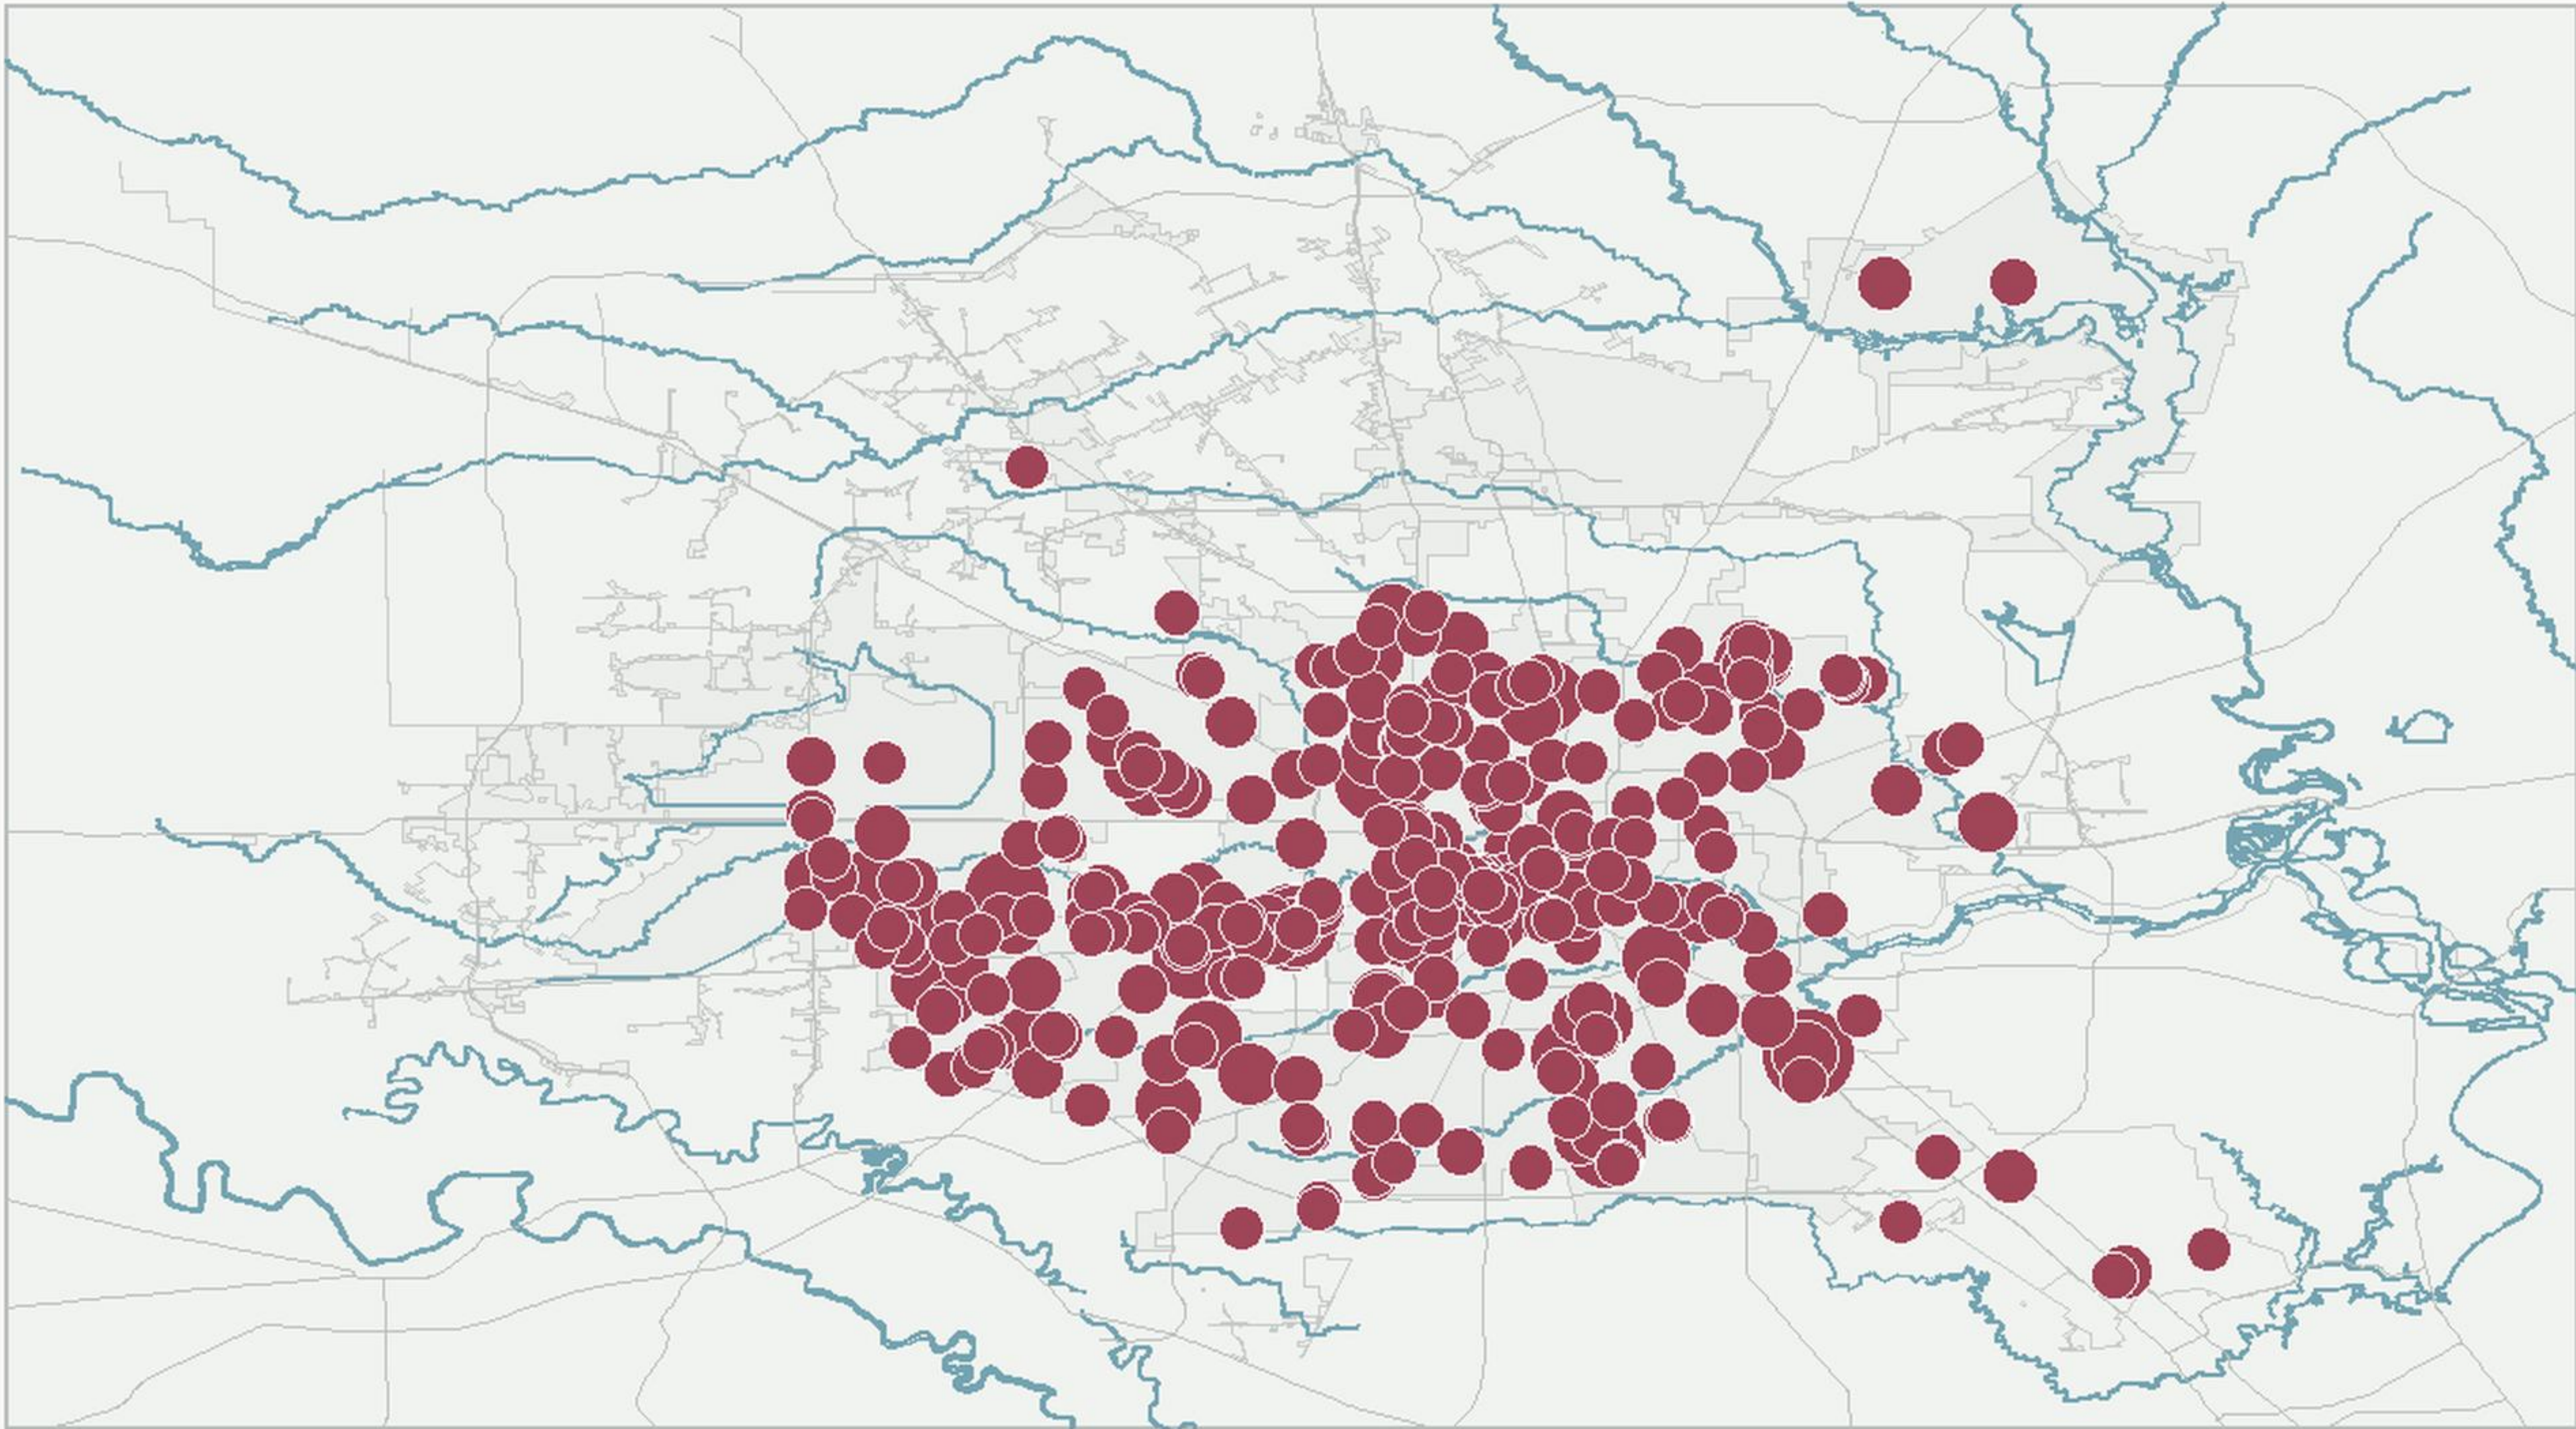

Source request coordinates are WGS84 latitude/longitude. Council district area values use source boundary geometry attributes. Static map display uses a fixed projected image frame.

Repeat-Location Infrastructure Clusters

Approximate recurring 311 infrastructure request locations

Repeat-Location Infrastructure Clusters

Approximate 100-meter coordinate bins with 3+ same-category requests

Top 350 repeat clusters drawn from 7,918 detected clusters.

How To Read This Map

Bubble symbols show approximate coordinate/category bins with three or more requests. This is a screening map for recurring service locations, not address-level deduplication.

Scale (approx.)

Approximate because this plate uses a static image frame.

Sources and Notes

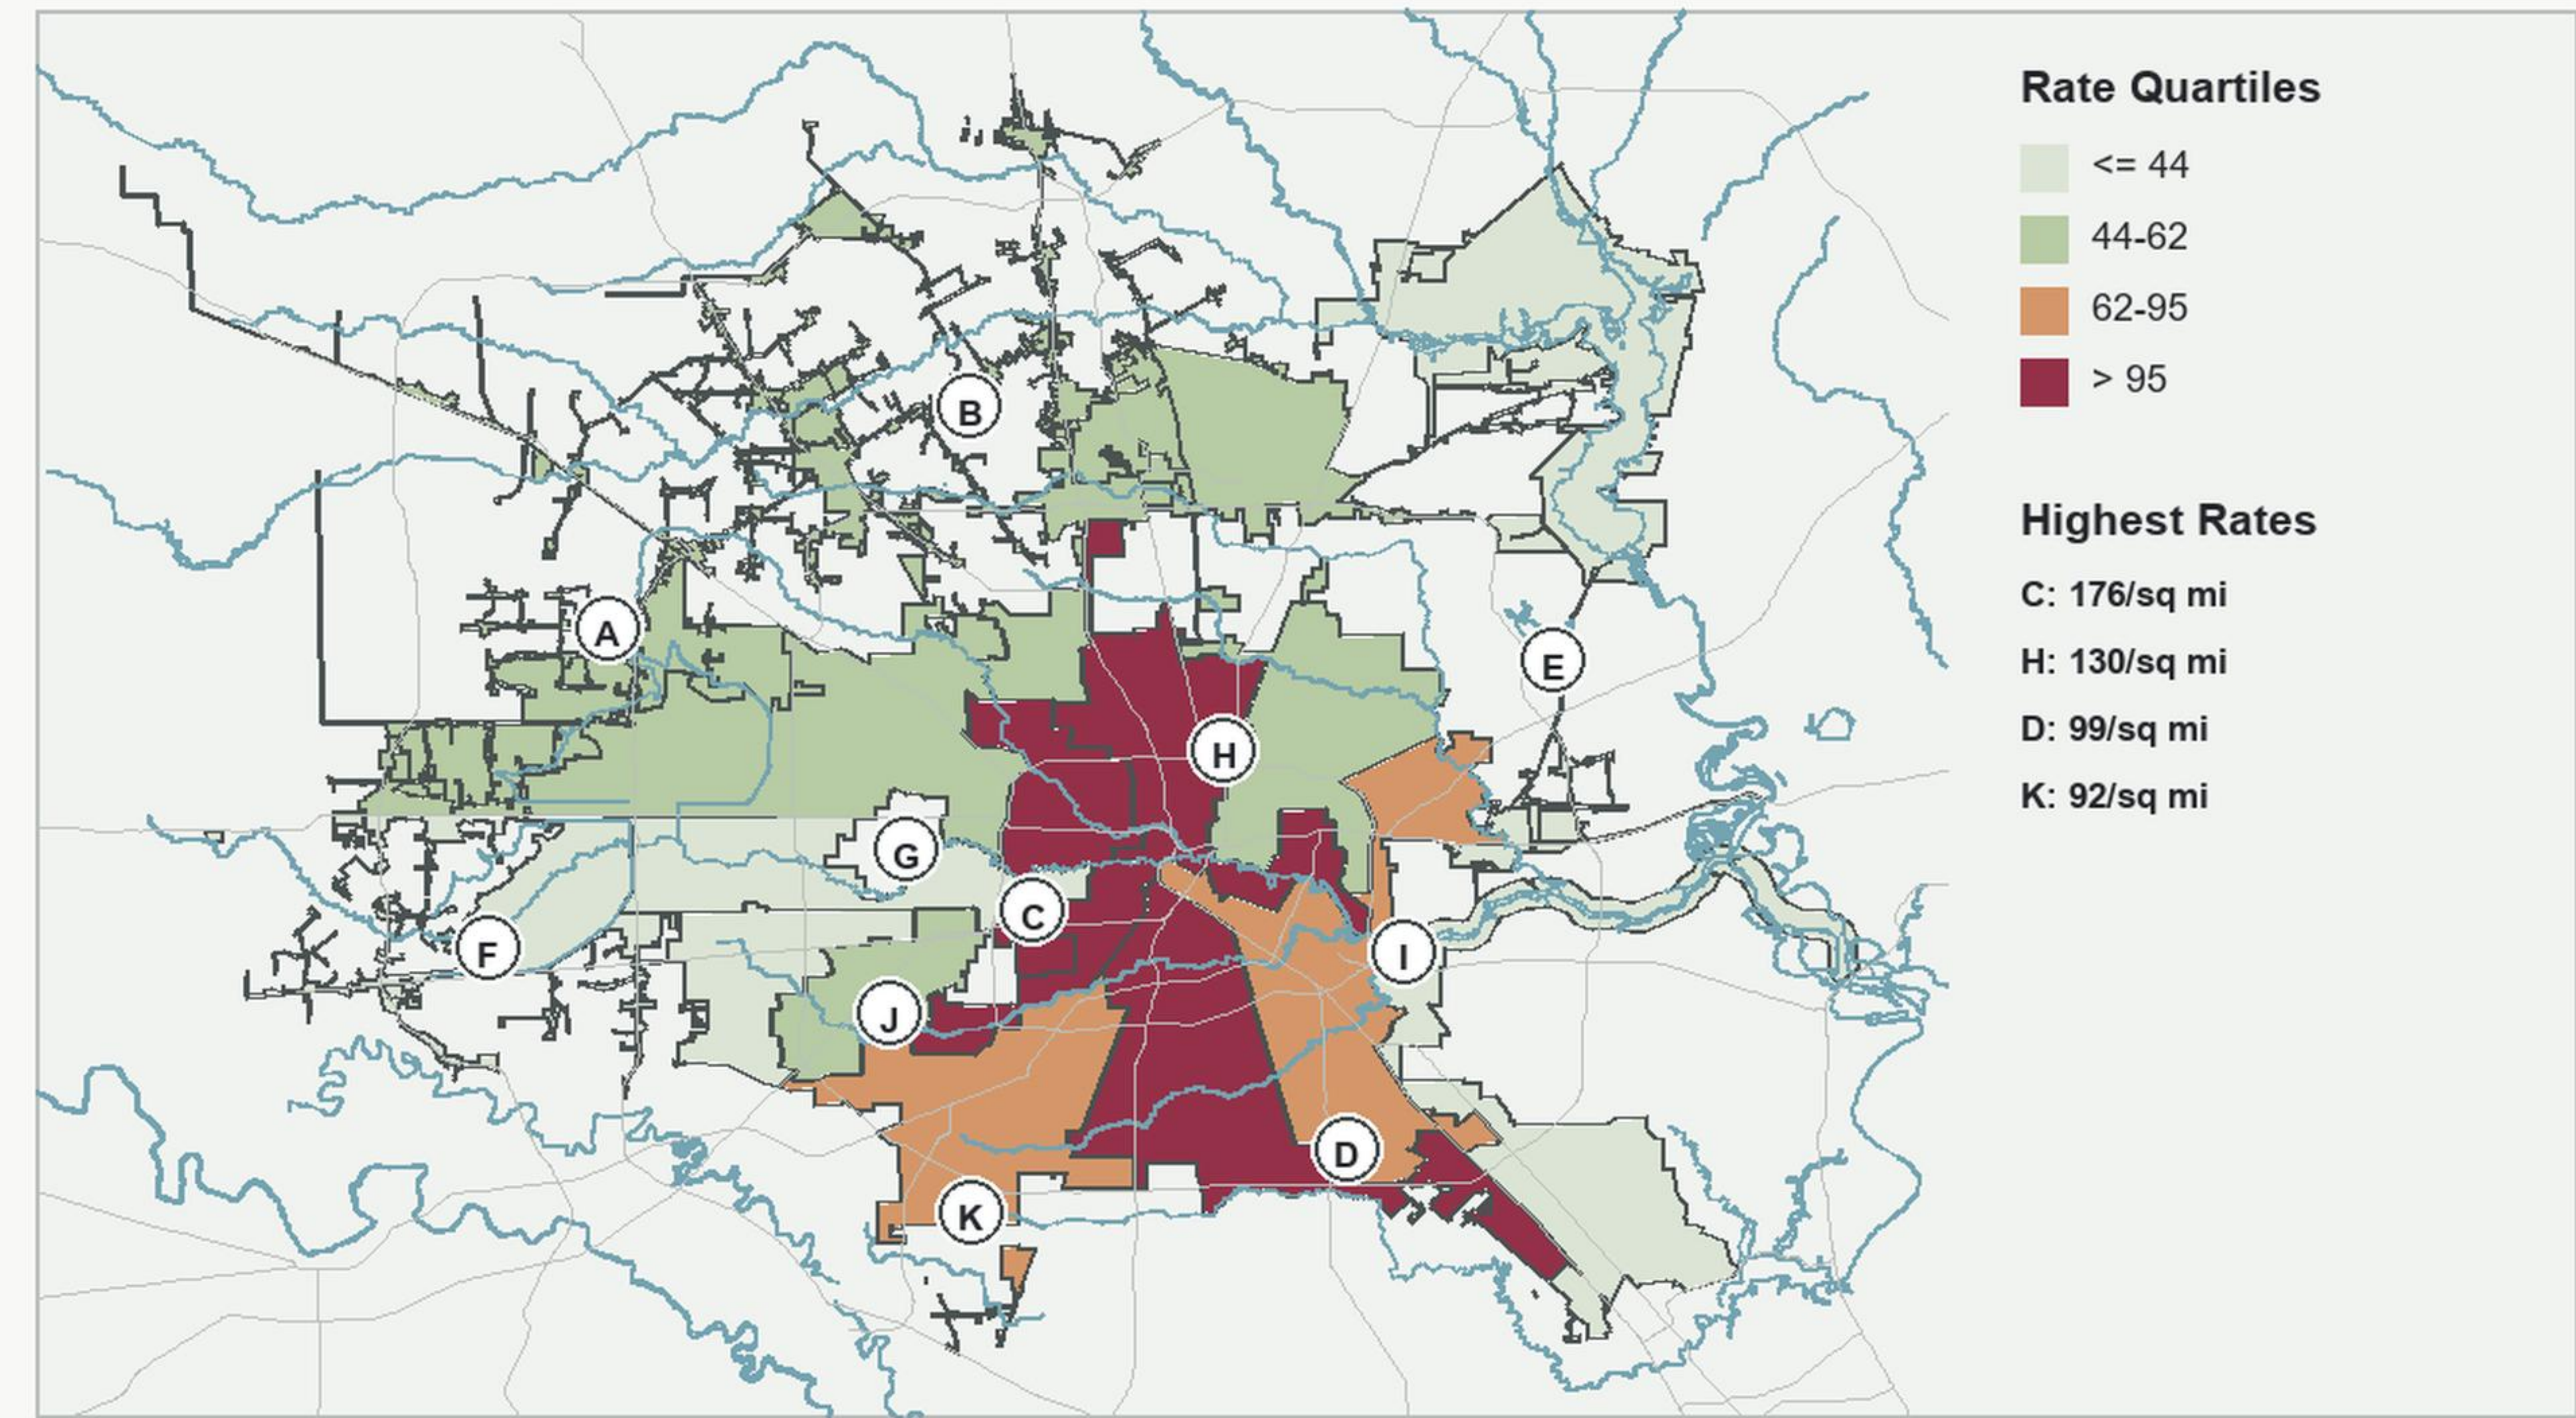

Sources: City of Houston 311 Archive; COHGIS / Harris County council district polygons; H-GAC map context layers. Static analytical output; not an official City of Houston metric.

Solid Waste and Recycling Request Rate

Council district thematic map | April-June 2025

Solid Waste and Recycling Request Rate

Requests Per Square Mile by council district; April-June 2025

How To Read This Map

Districts are shaded by within-theme request rate quartiles. This map highlights the dominant request category in the extract.

Scale (approx.)

Approximate because this plate uses a static image frame.

Sources and Notes

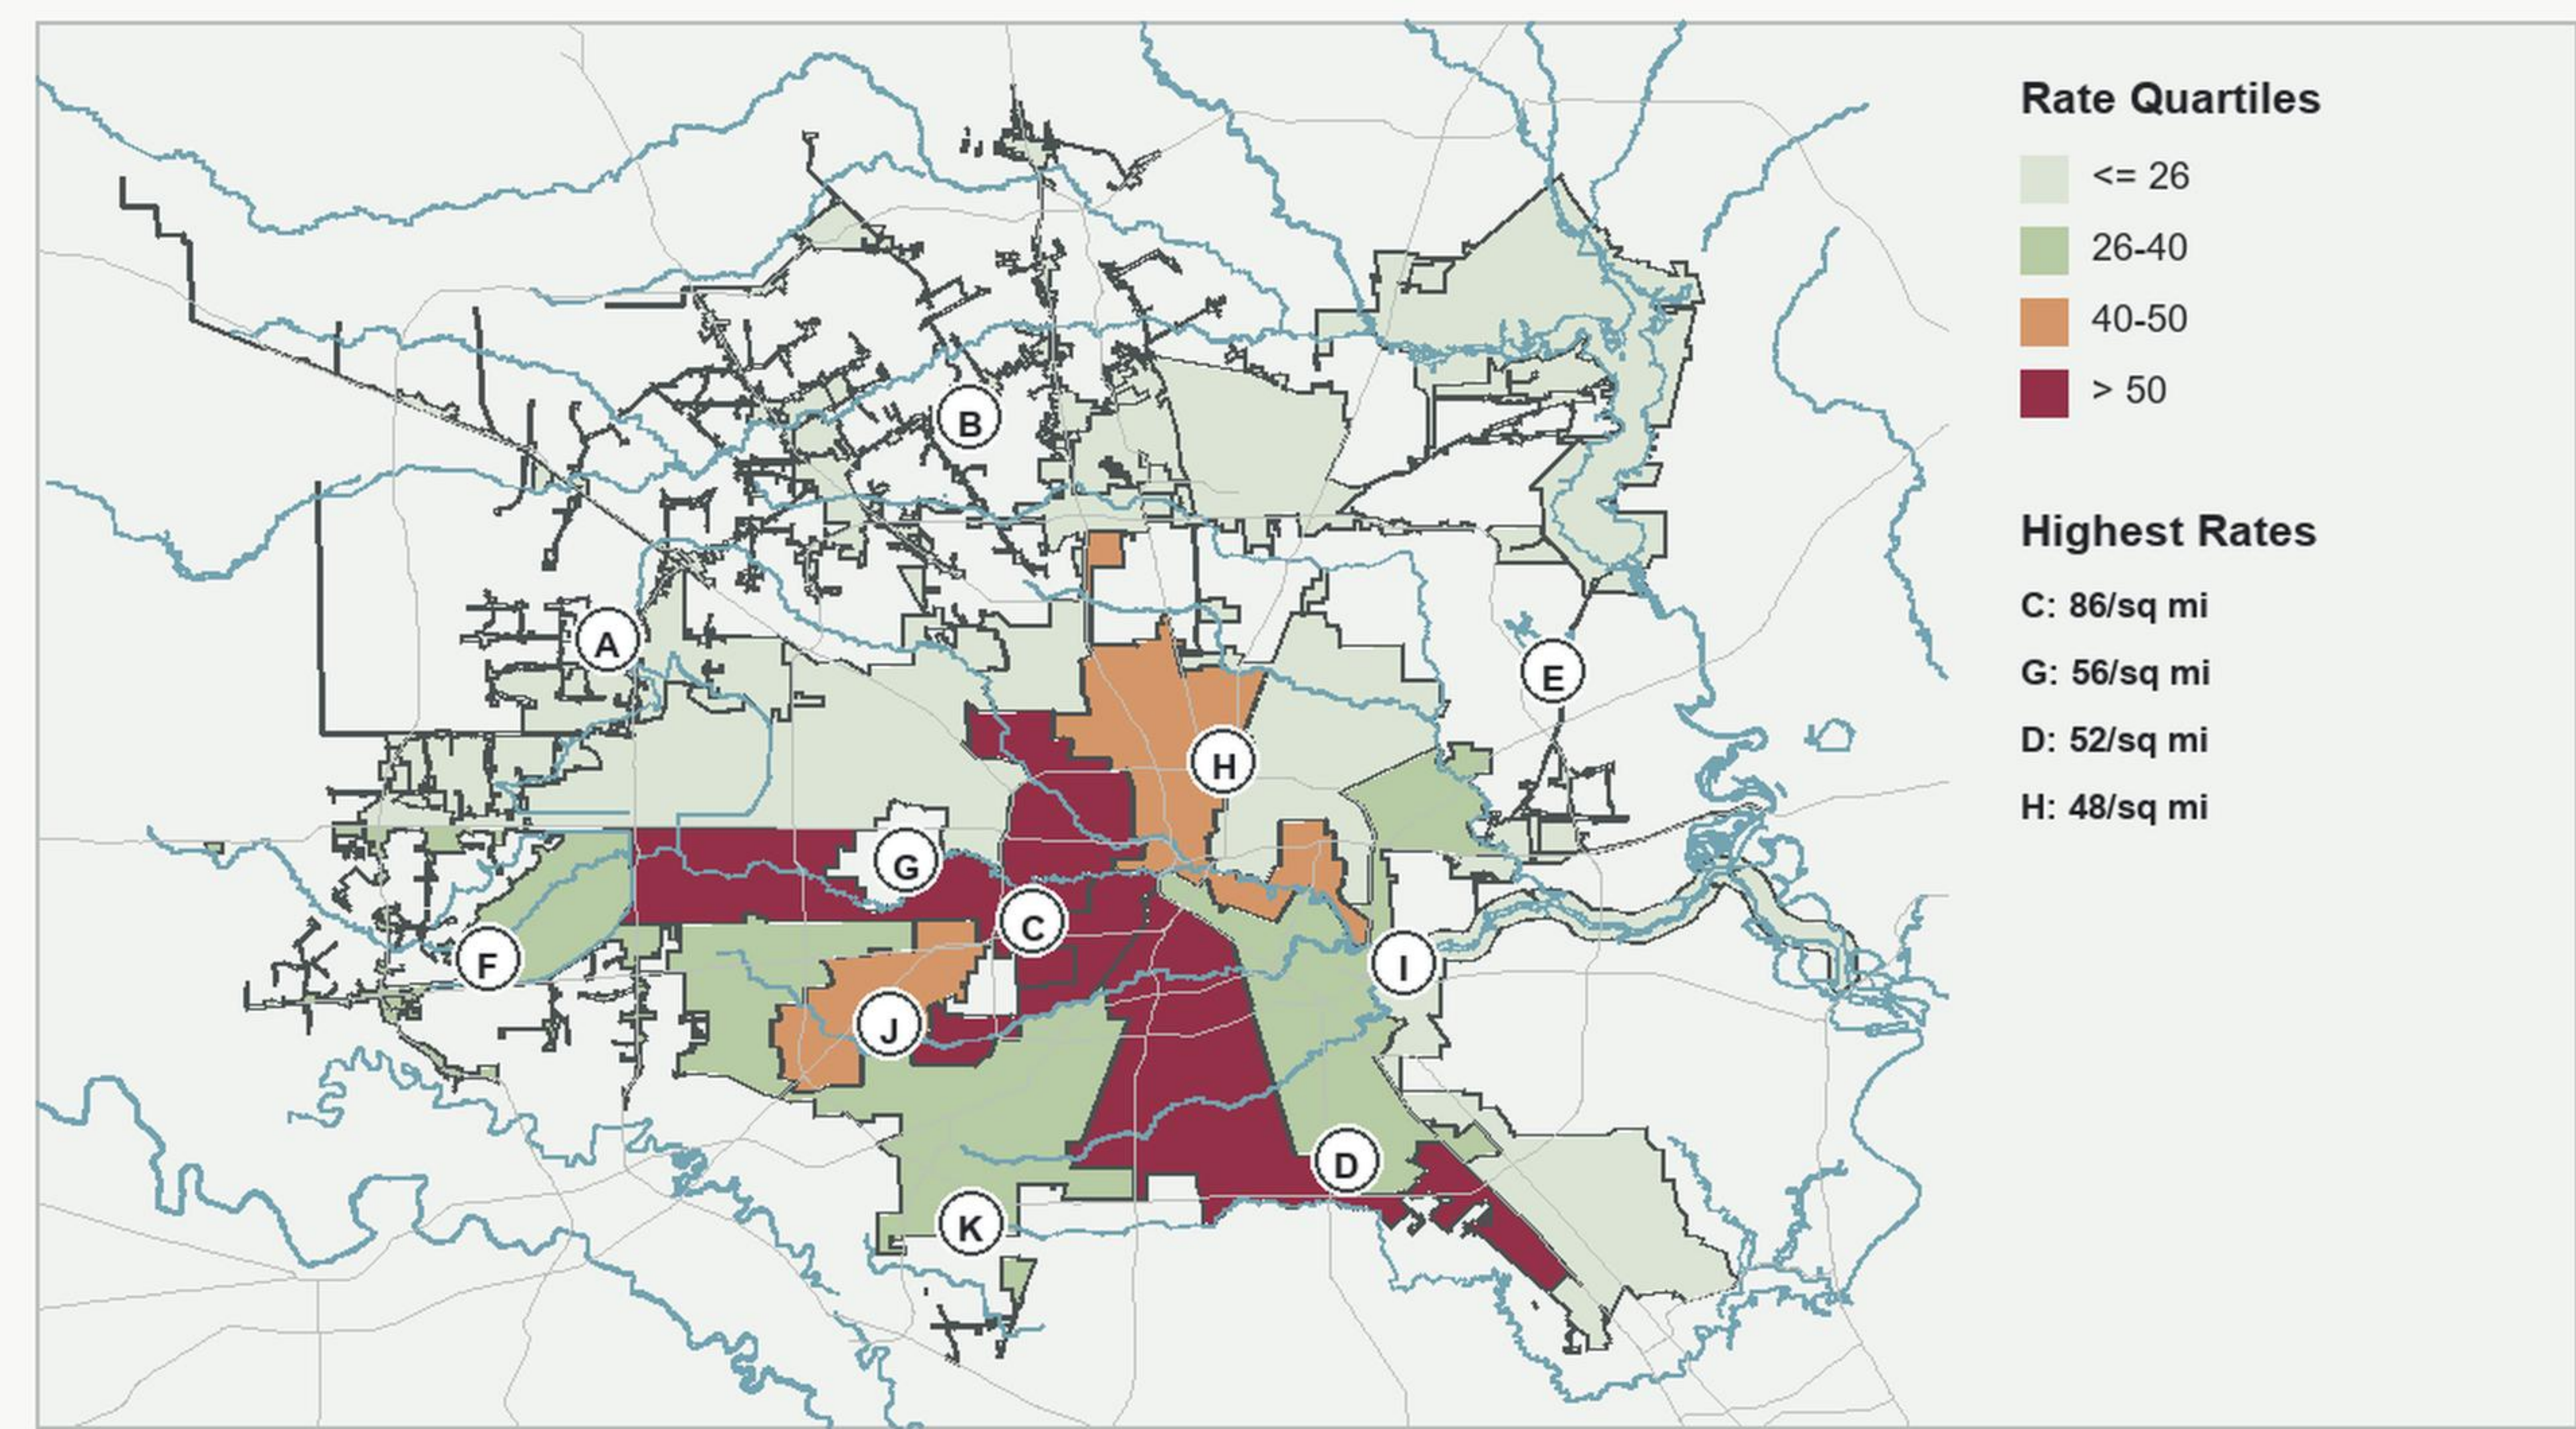

Sources: City of Houston 311 Archive; COHGIS / Harris County council district polygons; H-GAC map context layers. Static analytical output; not an official City of Houston metric.

Water, Sewer, and Drainage Request Rate

Council district thematic map | April-June 2025

Water, Sewer, and Drainage Request Rate

Requests Per Square Mile by council district; April-June 2025

How To Read This Map

Districts are shaded by within-theme request rate quartiles for water, sewer, and drainage-related request categories.

Scale (approx.)

Approximate because this plate uses a static image frame.

Sources and Notes

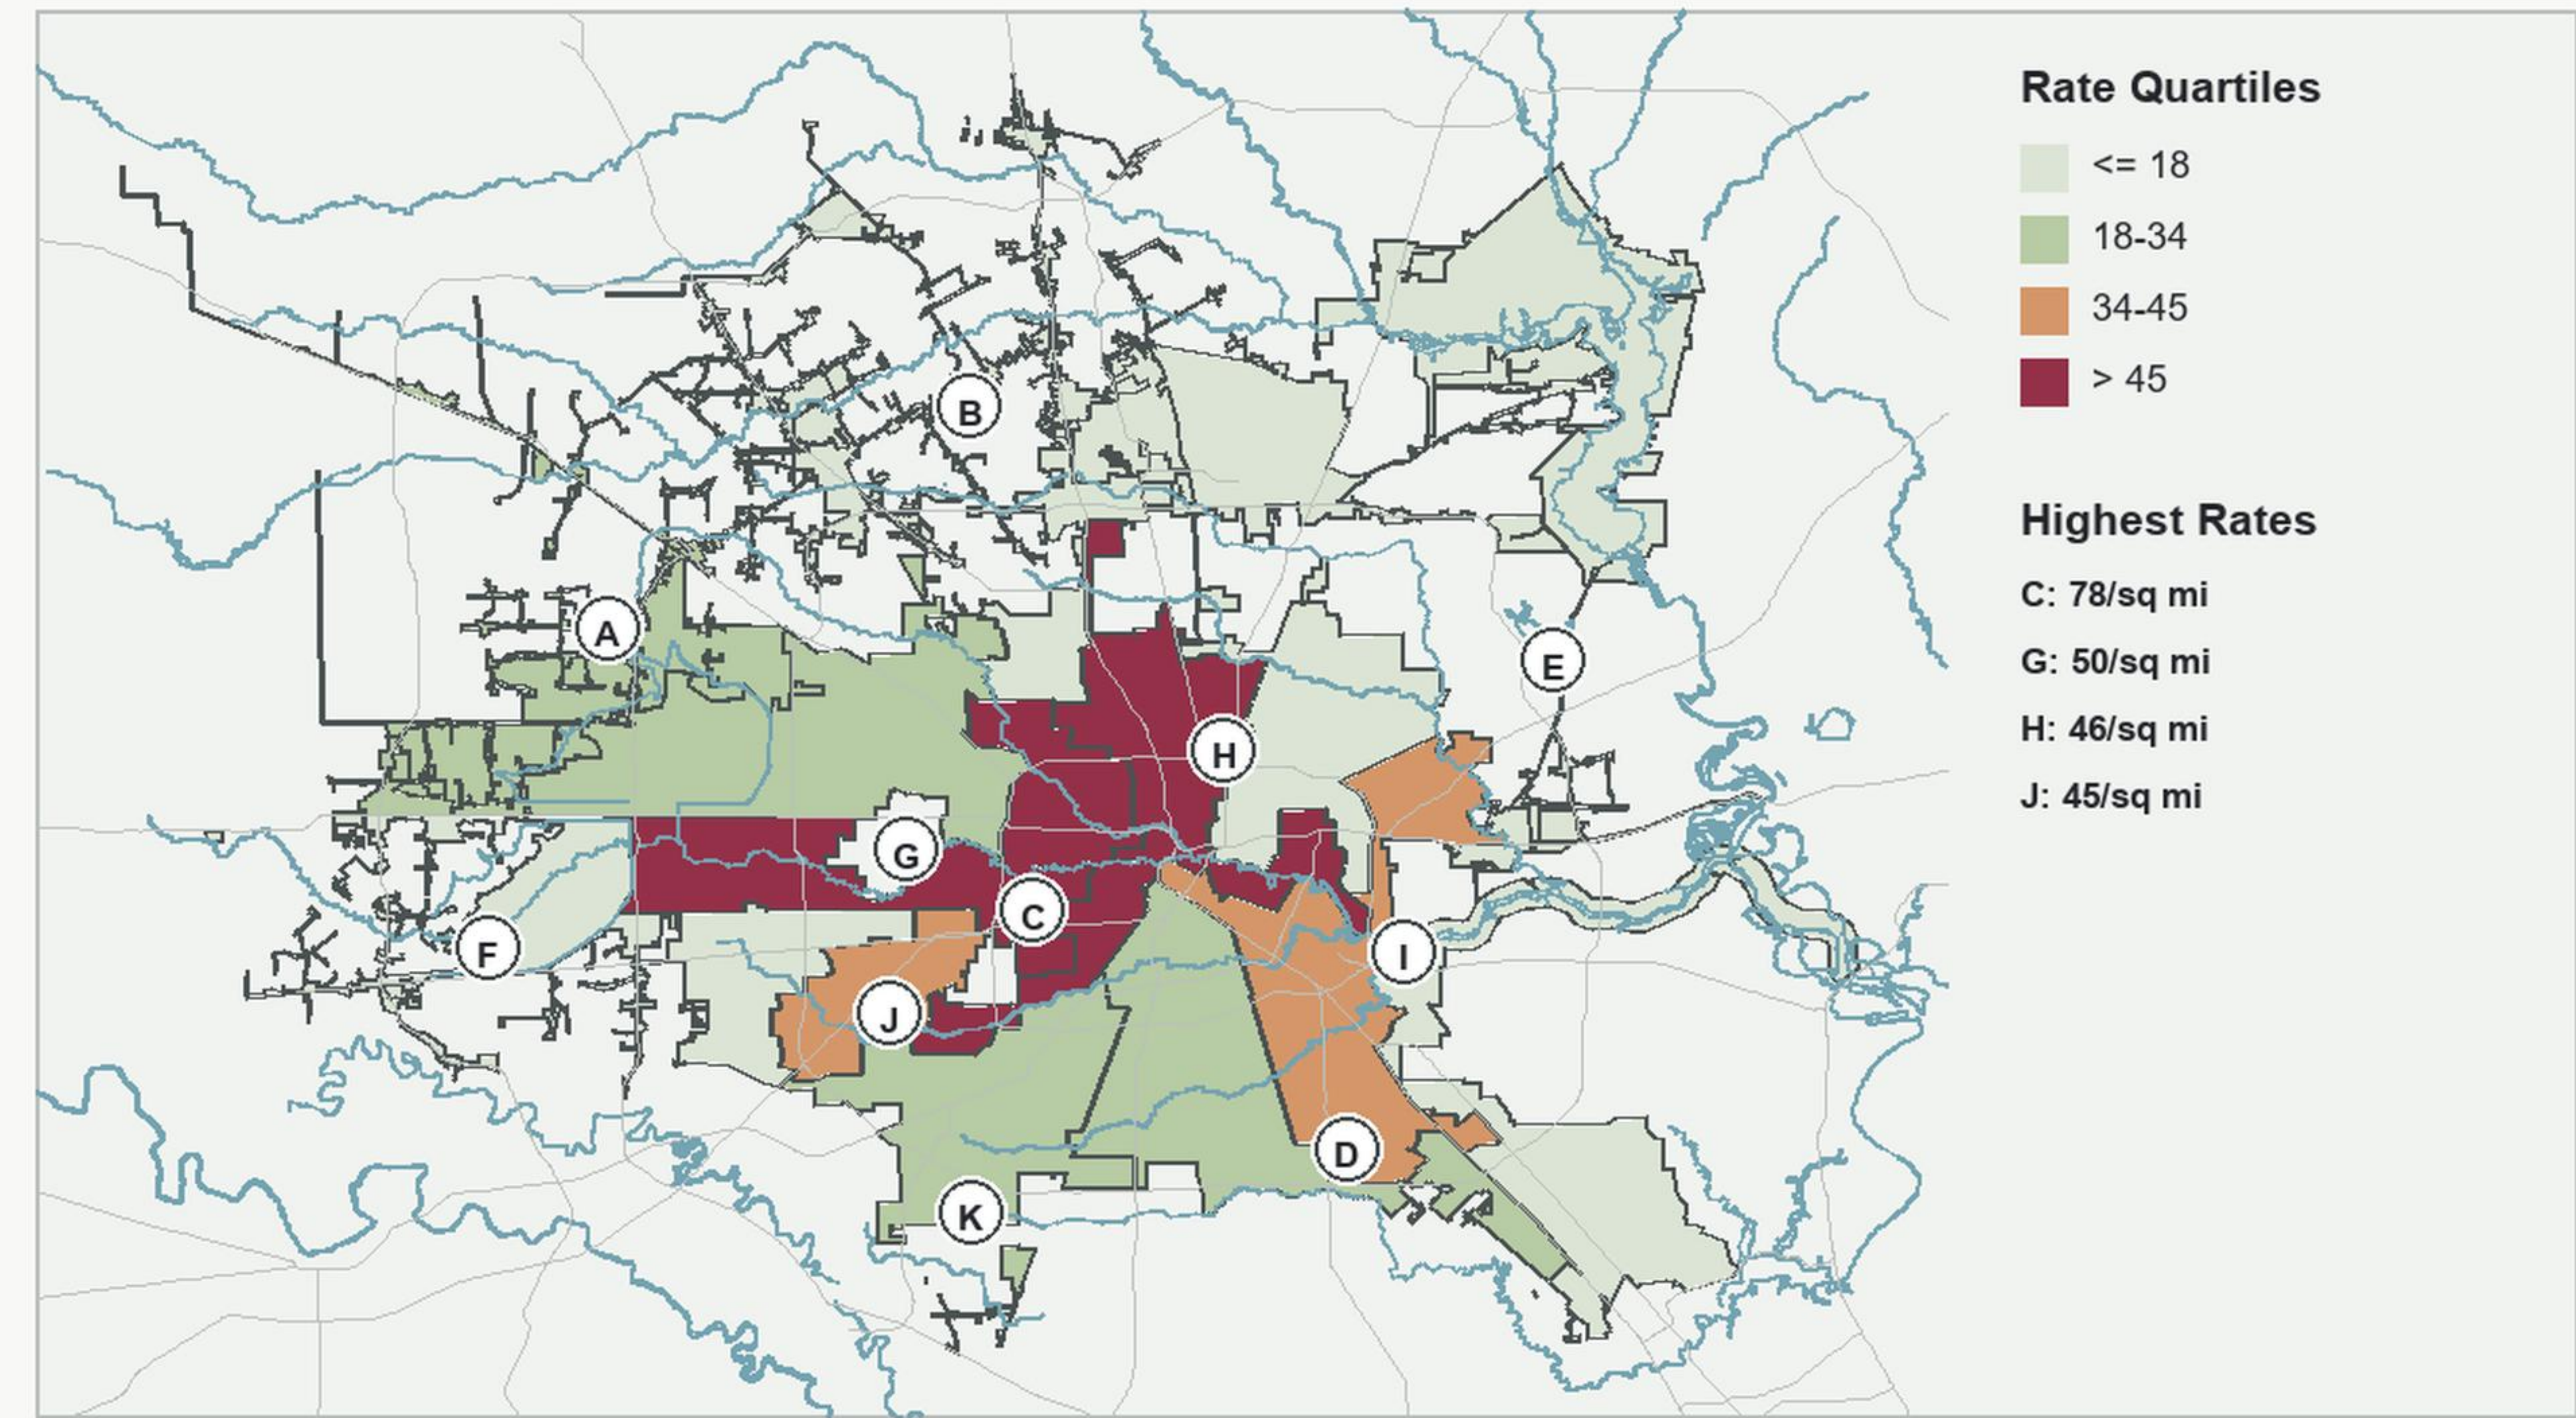

Sources: City of Houston 311 Archive; COHGIS / Harris County council district polygons; H-GAC map context layers. Static analytical output; not an official City of Houston metric.

Road, Signal, and Sidewalk Request Rate

Council district thematic map | April-June 2025

Road, Signal, and Sidewalk Request Rate

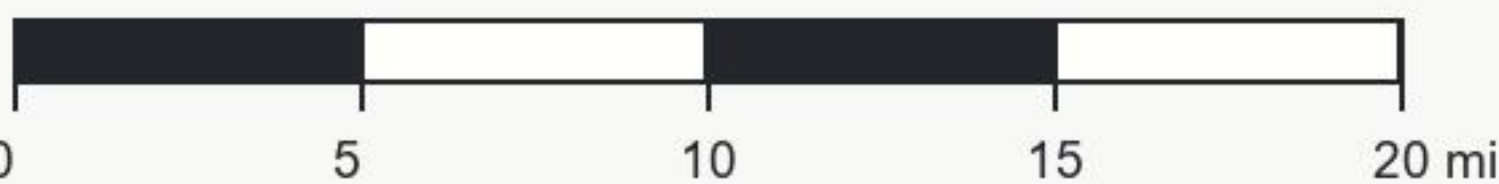

Requests Per Square Mile by council district; April-June 2025

How To Read This Map

Districts are shaded by within-theme request rate quartiles for road, signal, lighting, sidewalk, and bike-lane request categories.

Scale (approx.)

Approximate because this plate uses a static image frame.

Sources and Notes

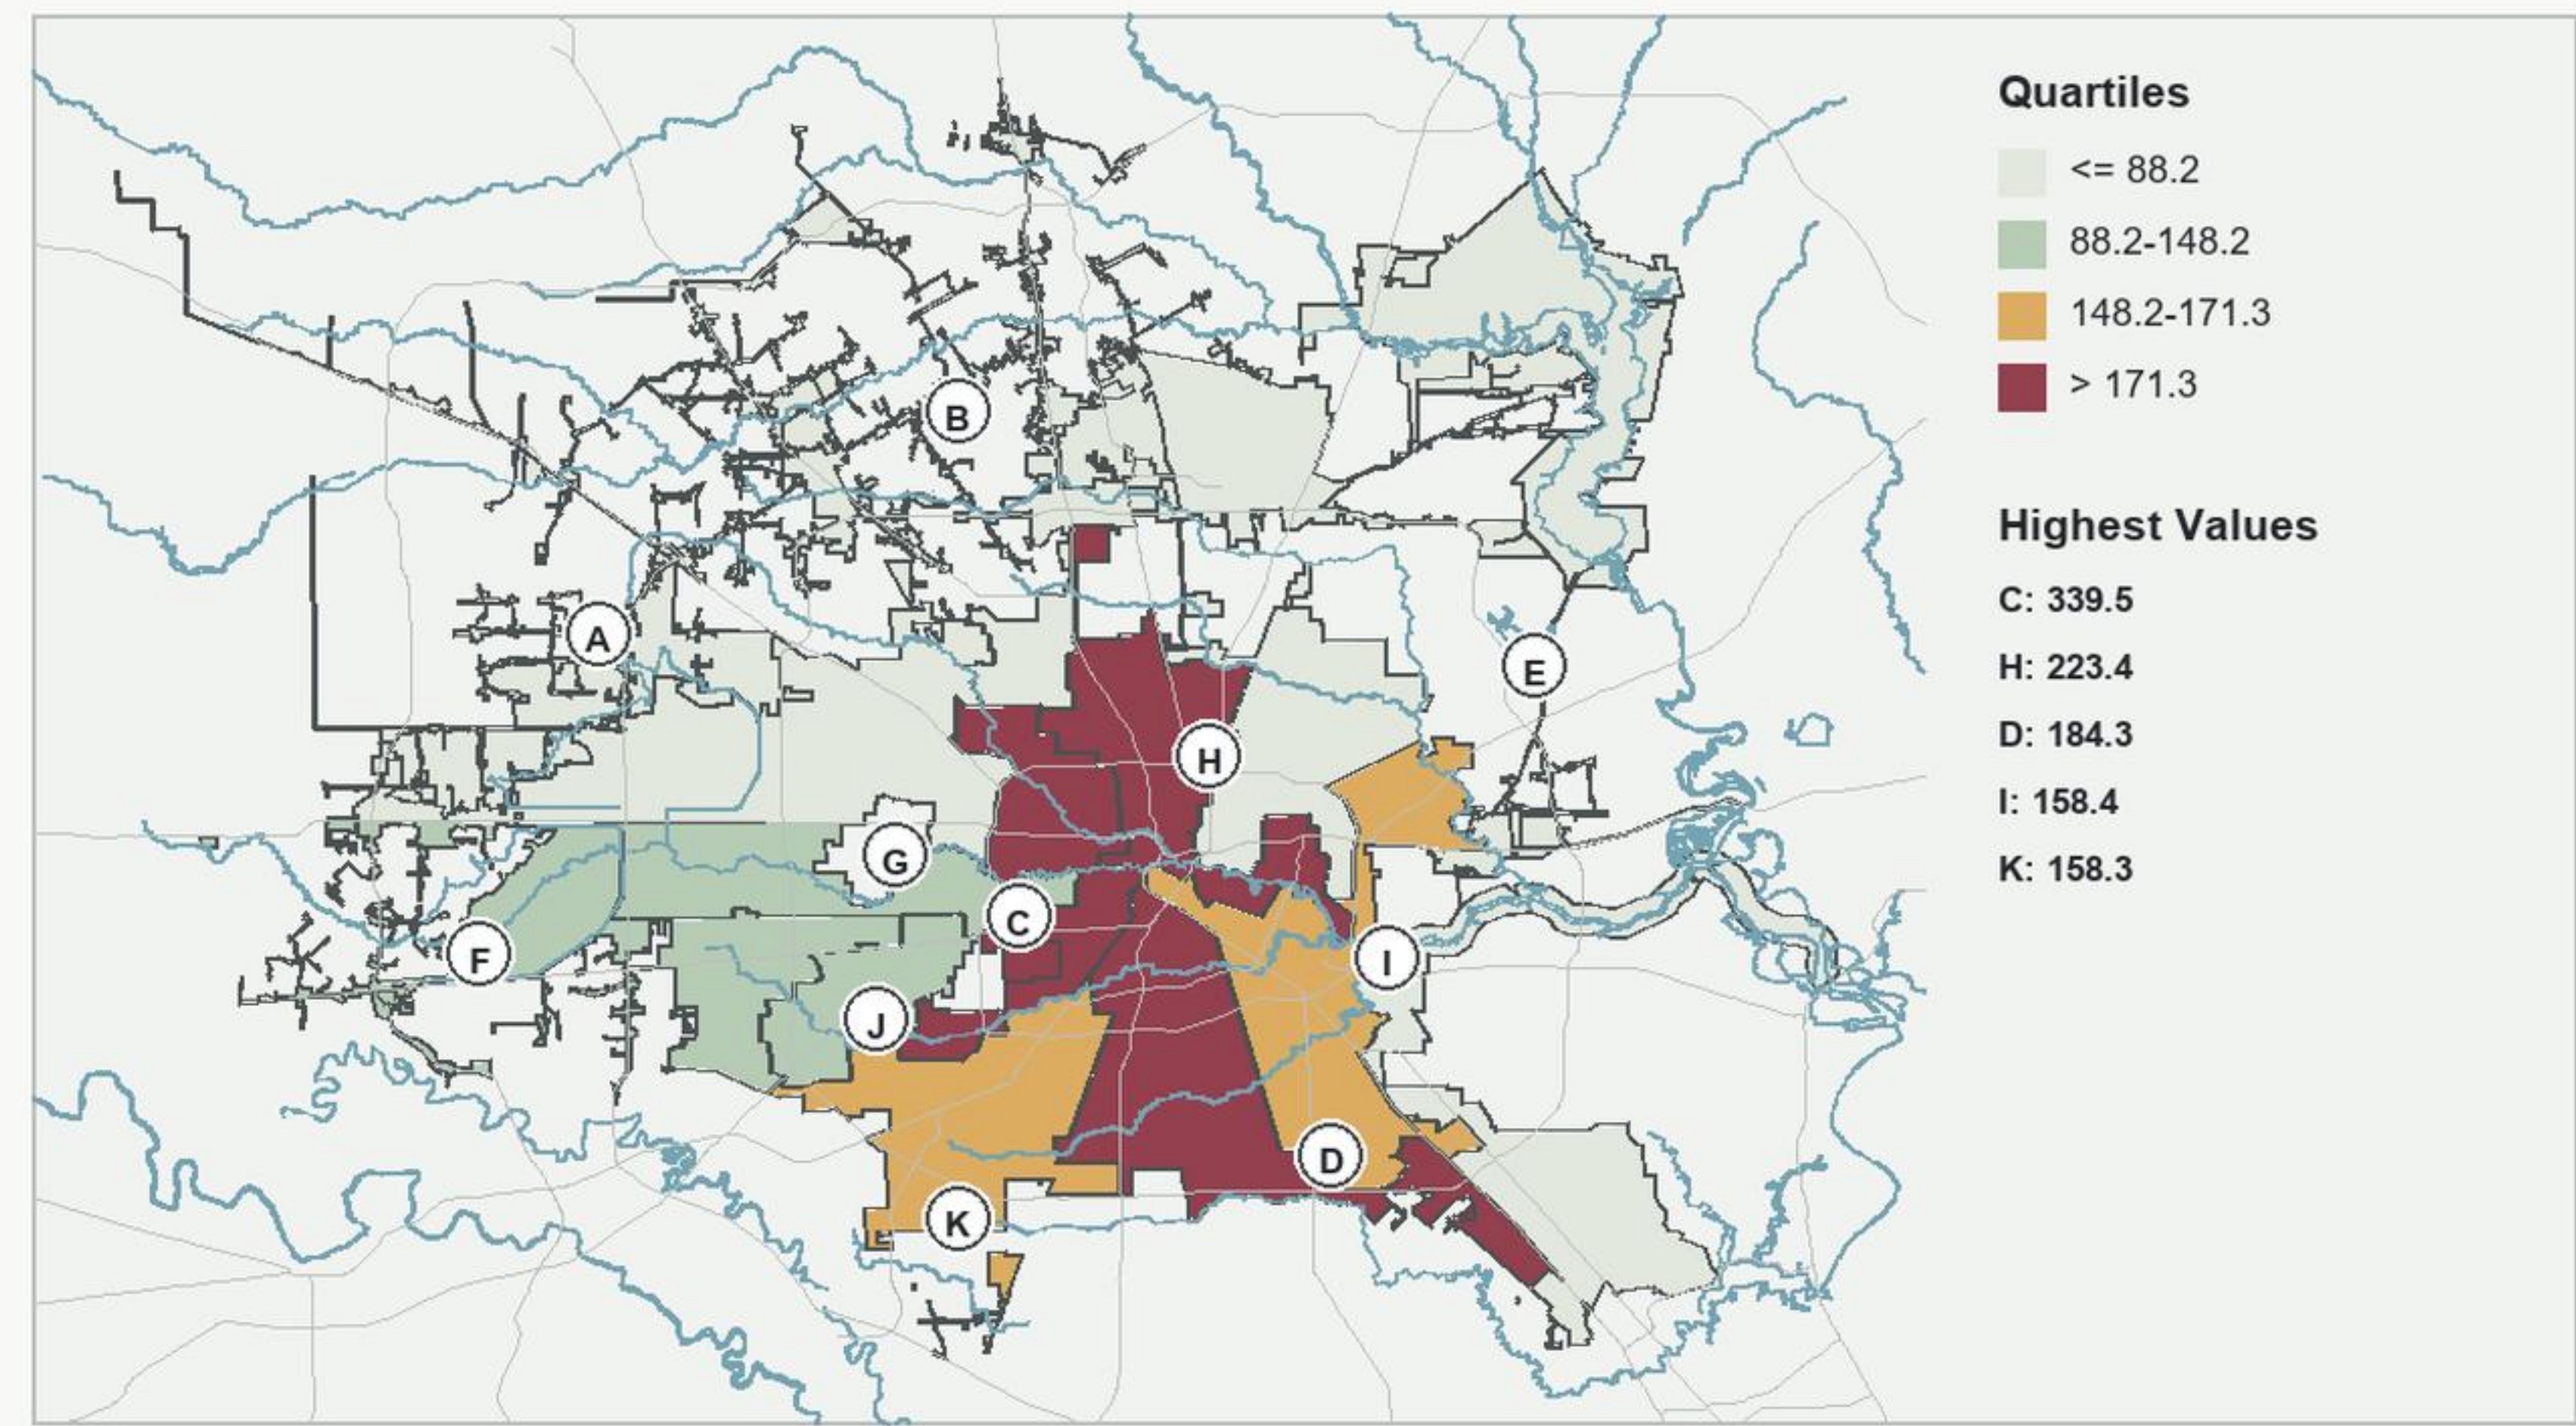

Sources: City of Houston 311 Archive; COHGIS / Harris County council district polygons; H-GAC map context layers. Static analytical output; not an official City of Houston metric.

Score Component Map Series

Council district component maps | April-June 2025 | Static GIS small multiples

Infrastructure Request Density

Requests per square mile by council district; April-June 2025

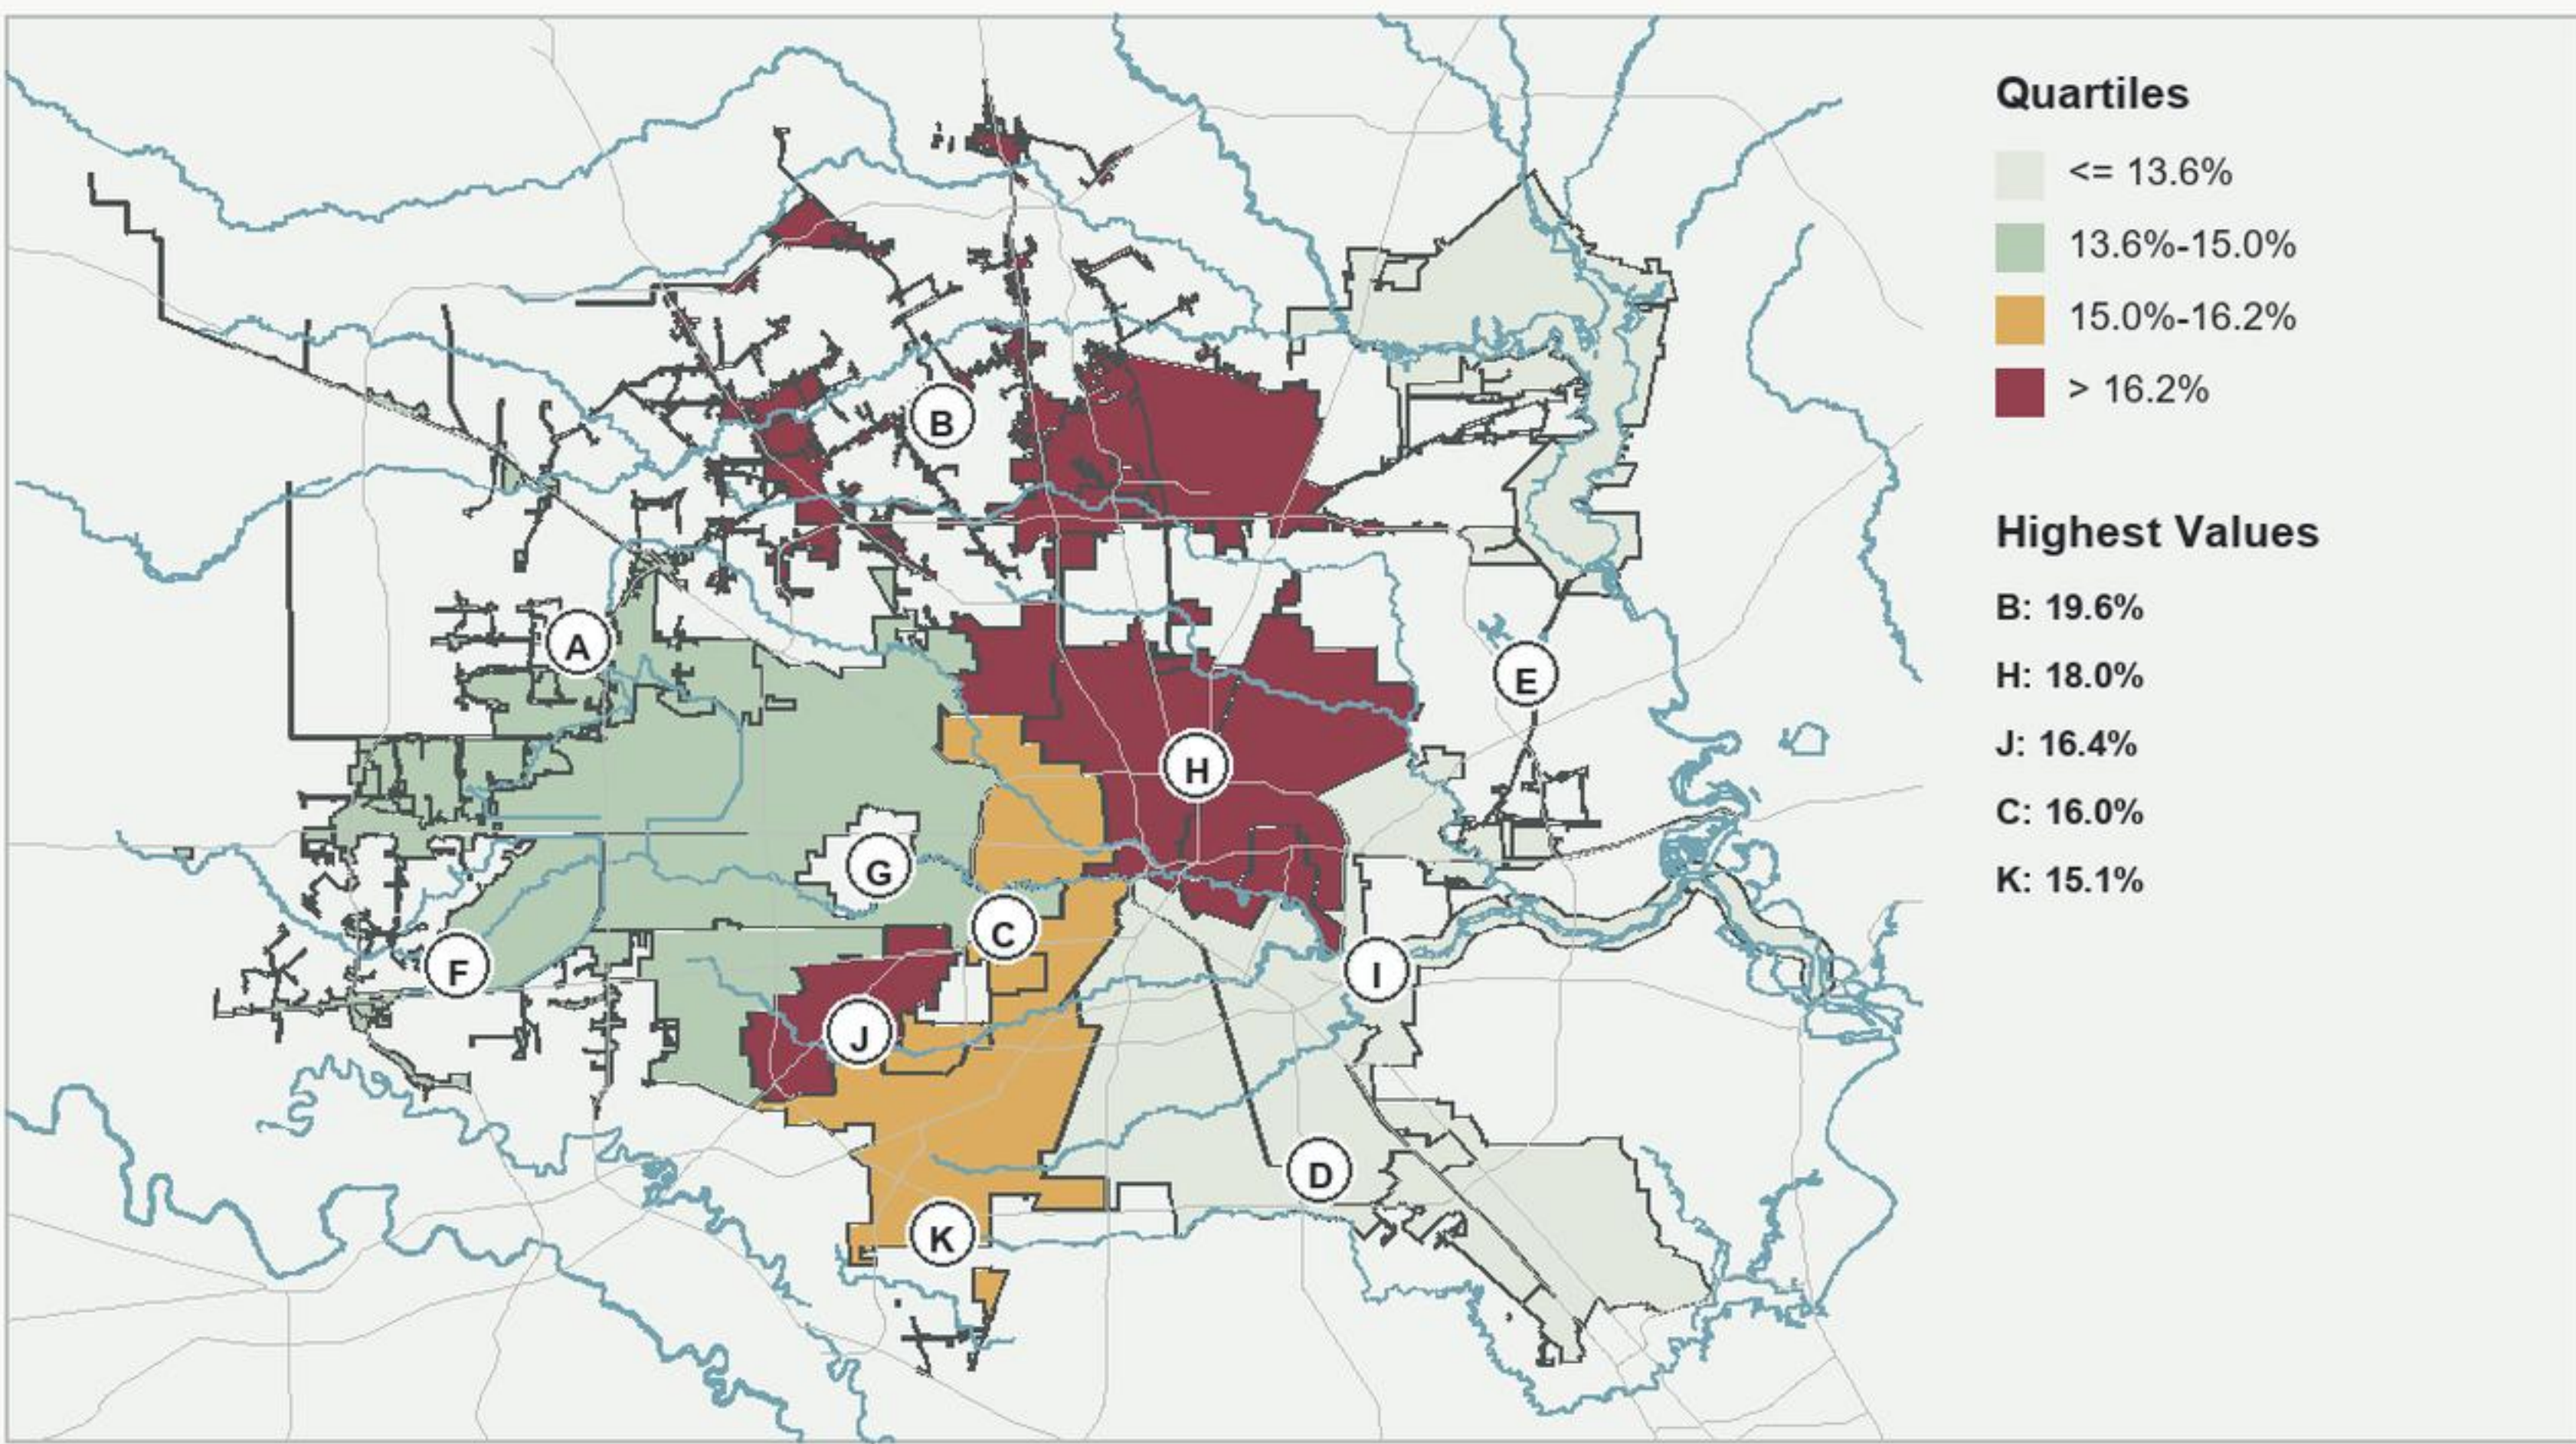

Component map for score interpretation; analytical screening output, not an official City metric.

Request density

Unresolved Request Share

Share of requests open/unresolved by council district; April-June 2025

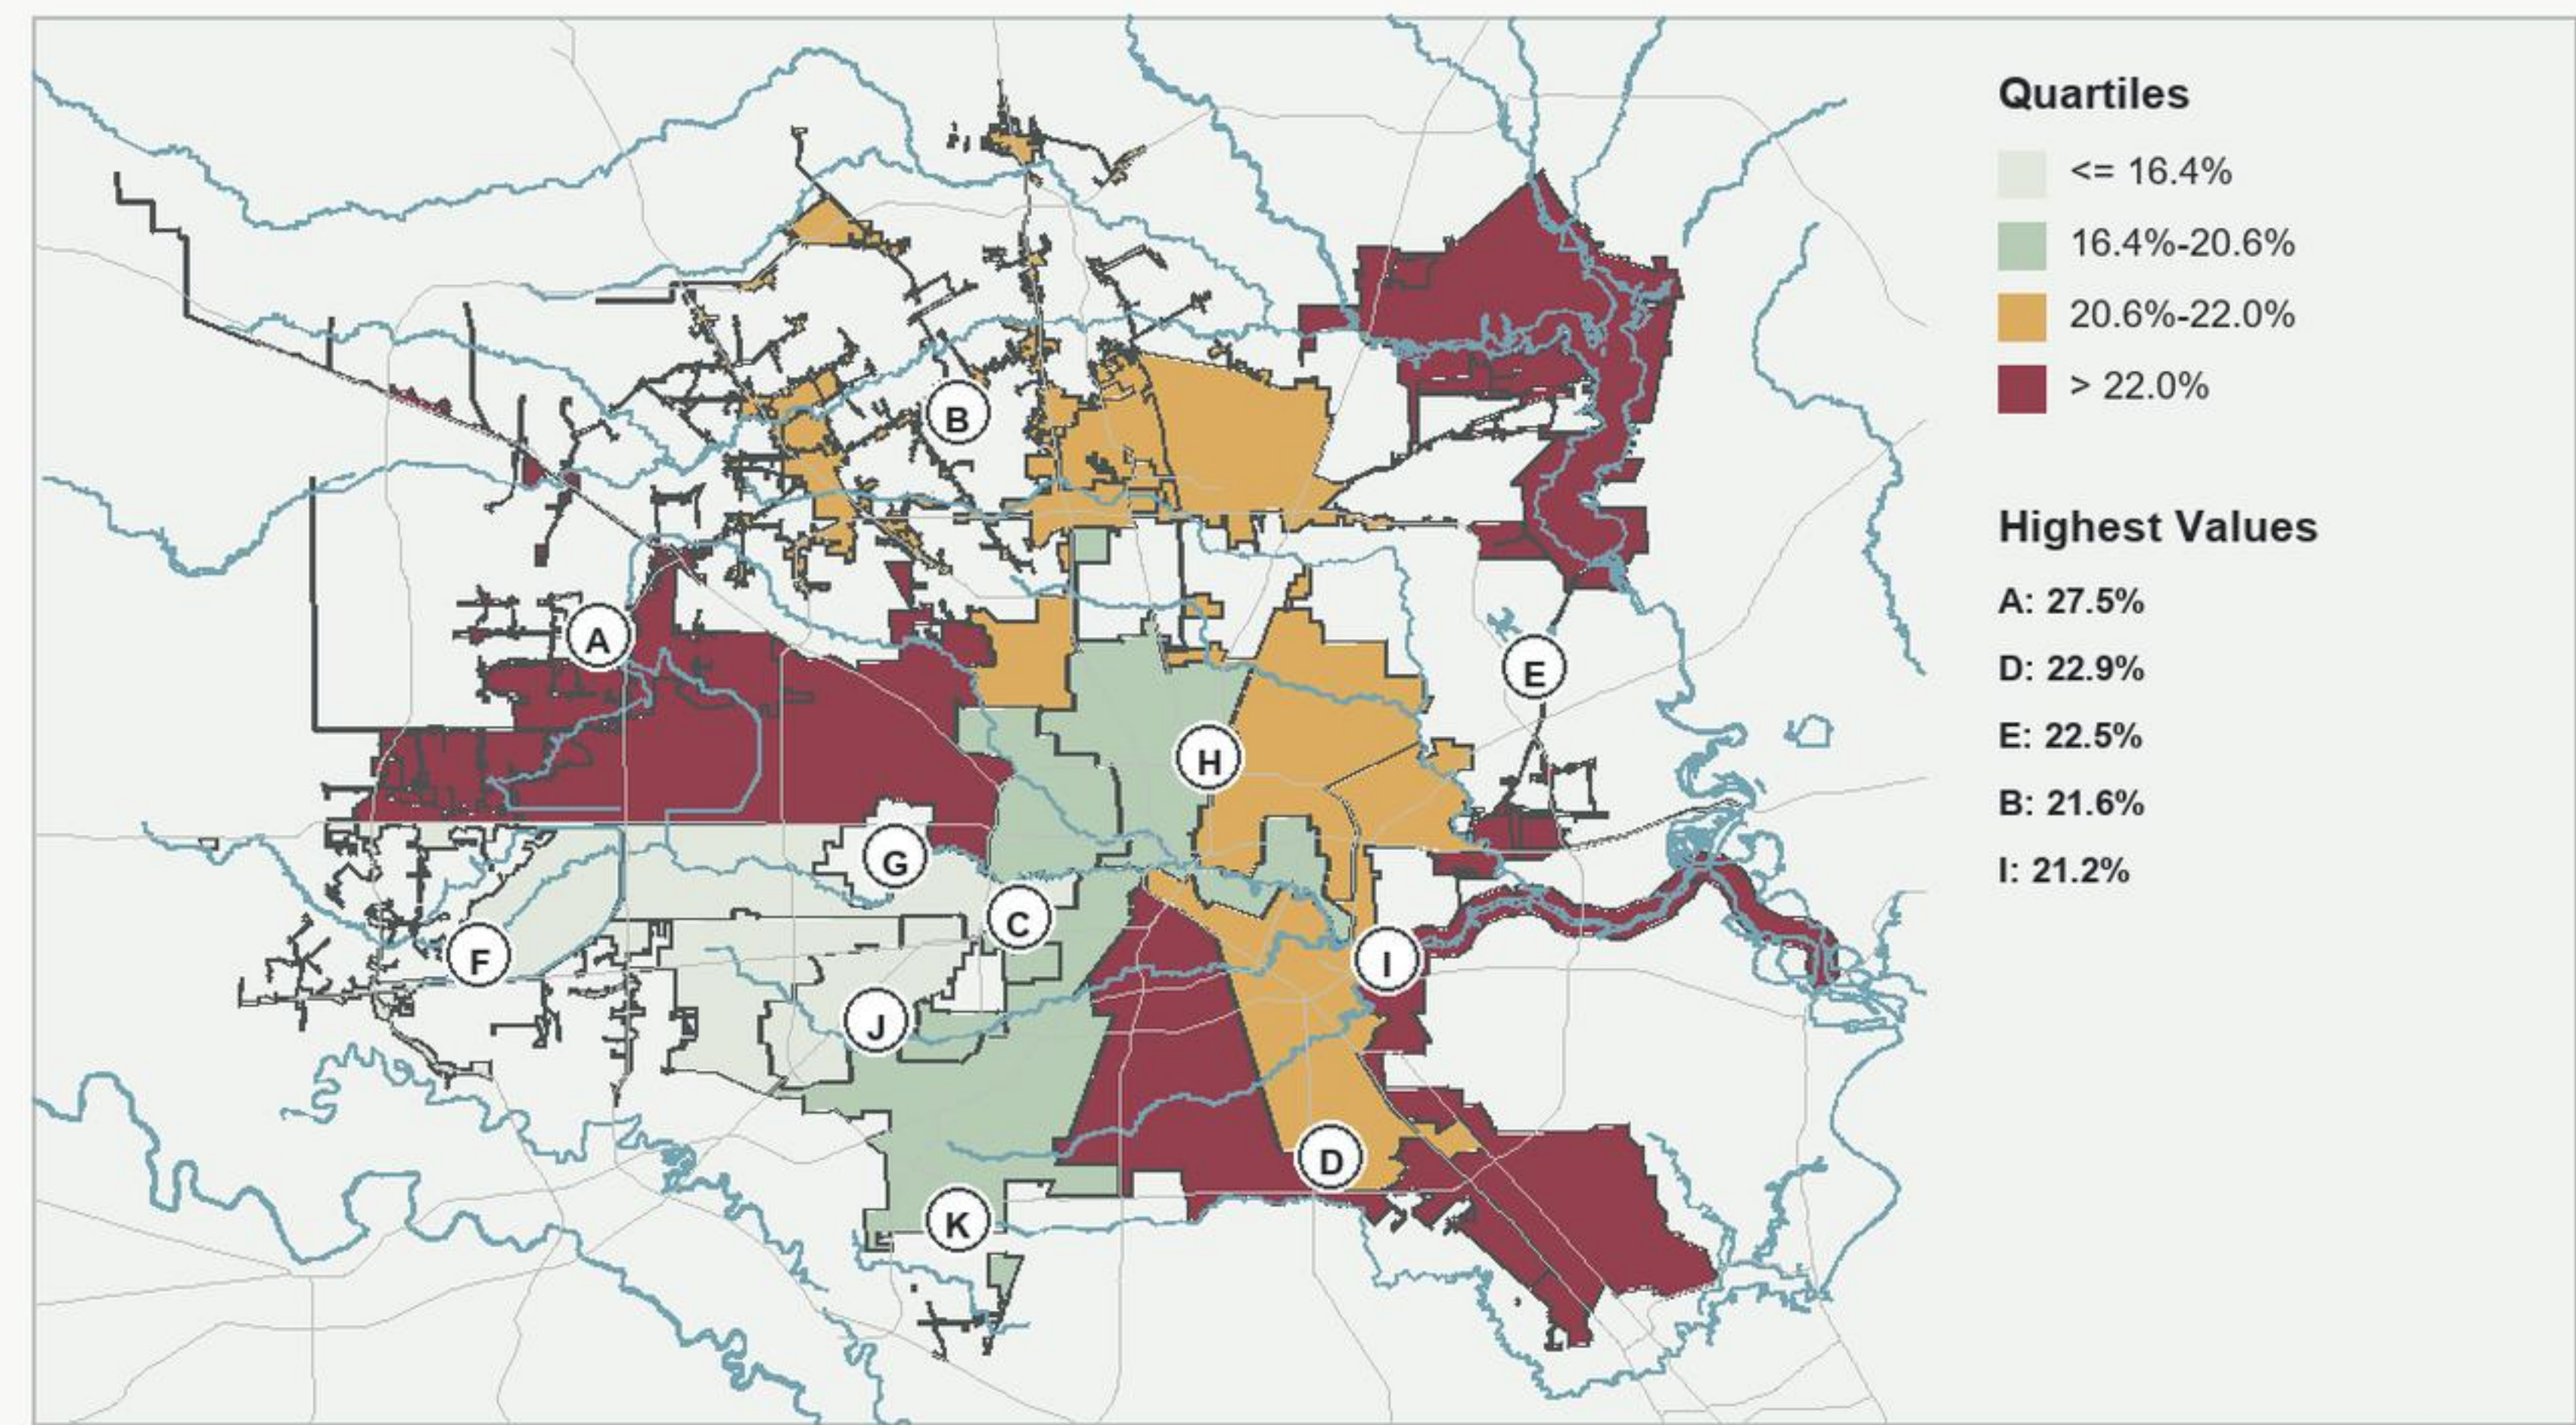

Component map for score interpretation; analytical screening output, not an official City metric.

Unresolved share

Long-Resolution Request Share

Share of requests over threshold by council district; April-June 2025

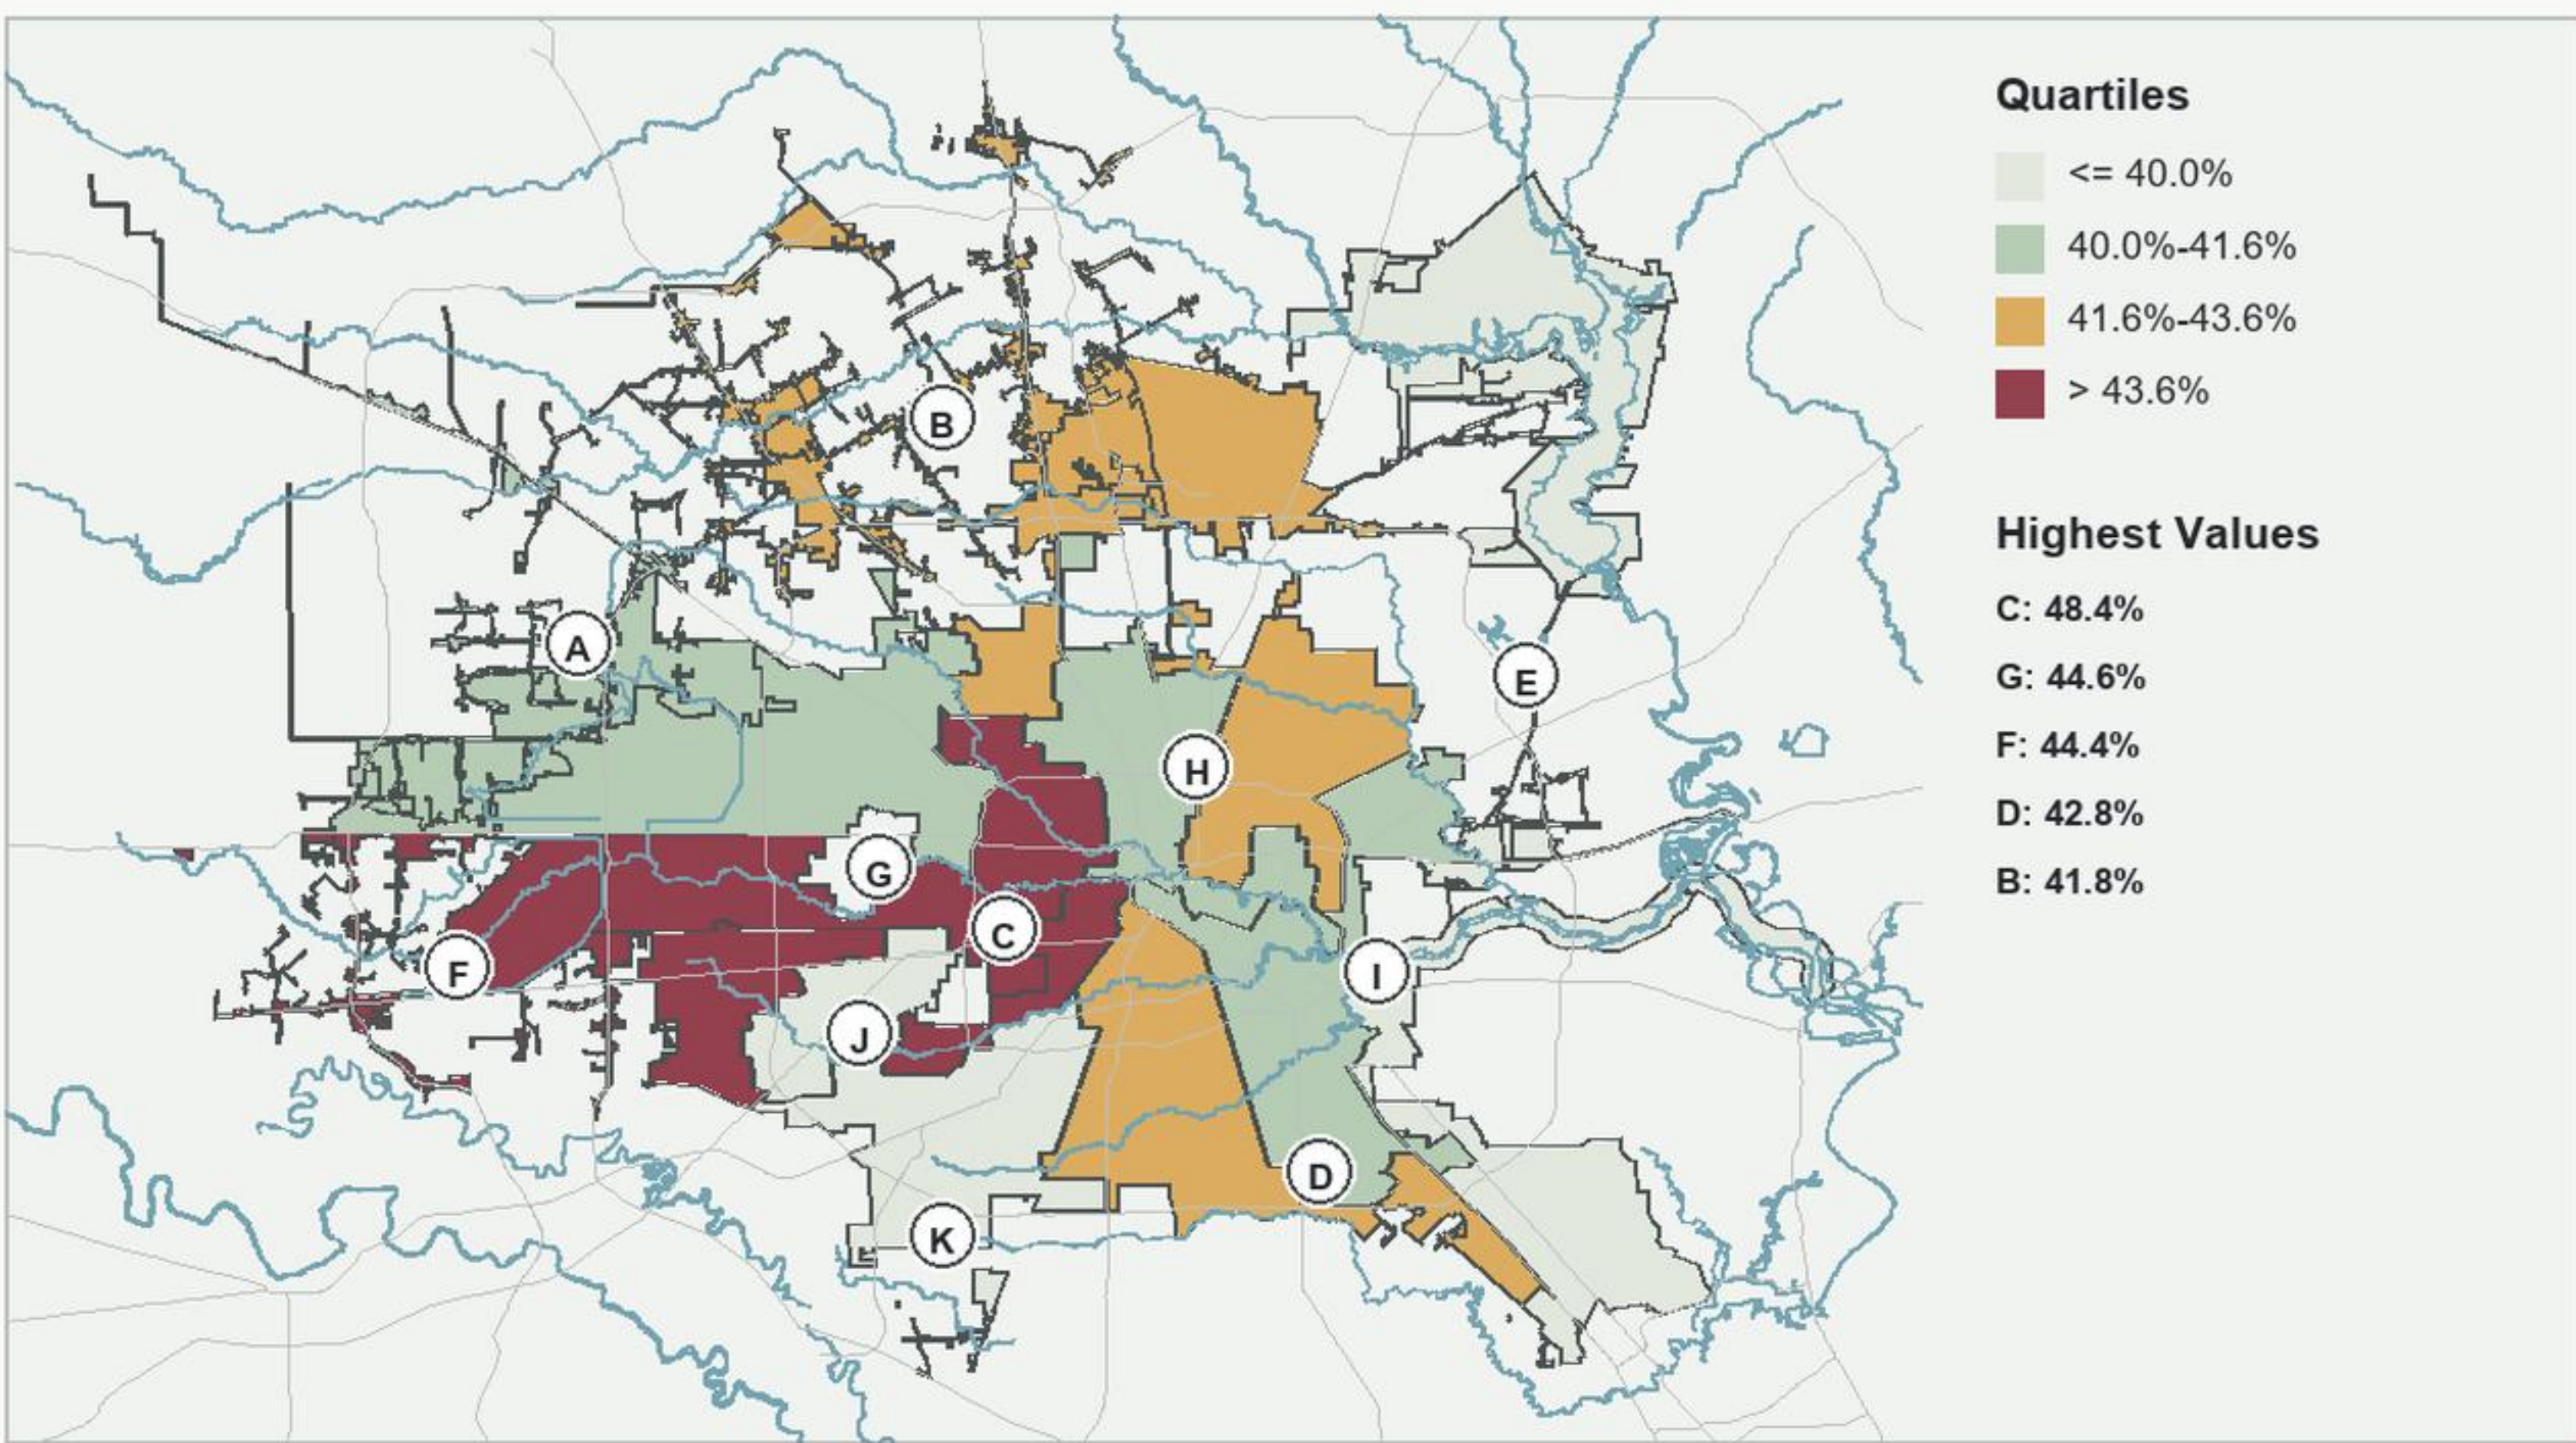

Component map for score interpretation; analytical screening output, not an official City metric.

Long-resolution share

Repeat-Cluster Request Share

Share of requests in repeat-location clusters by council district; April-June 2025

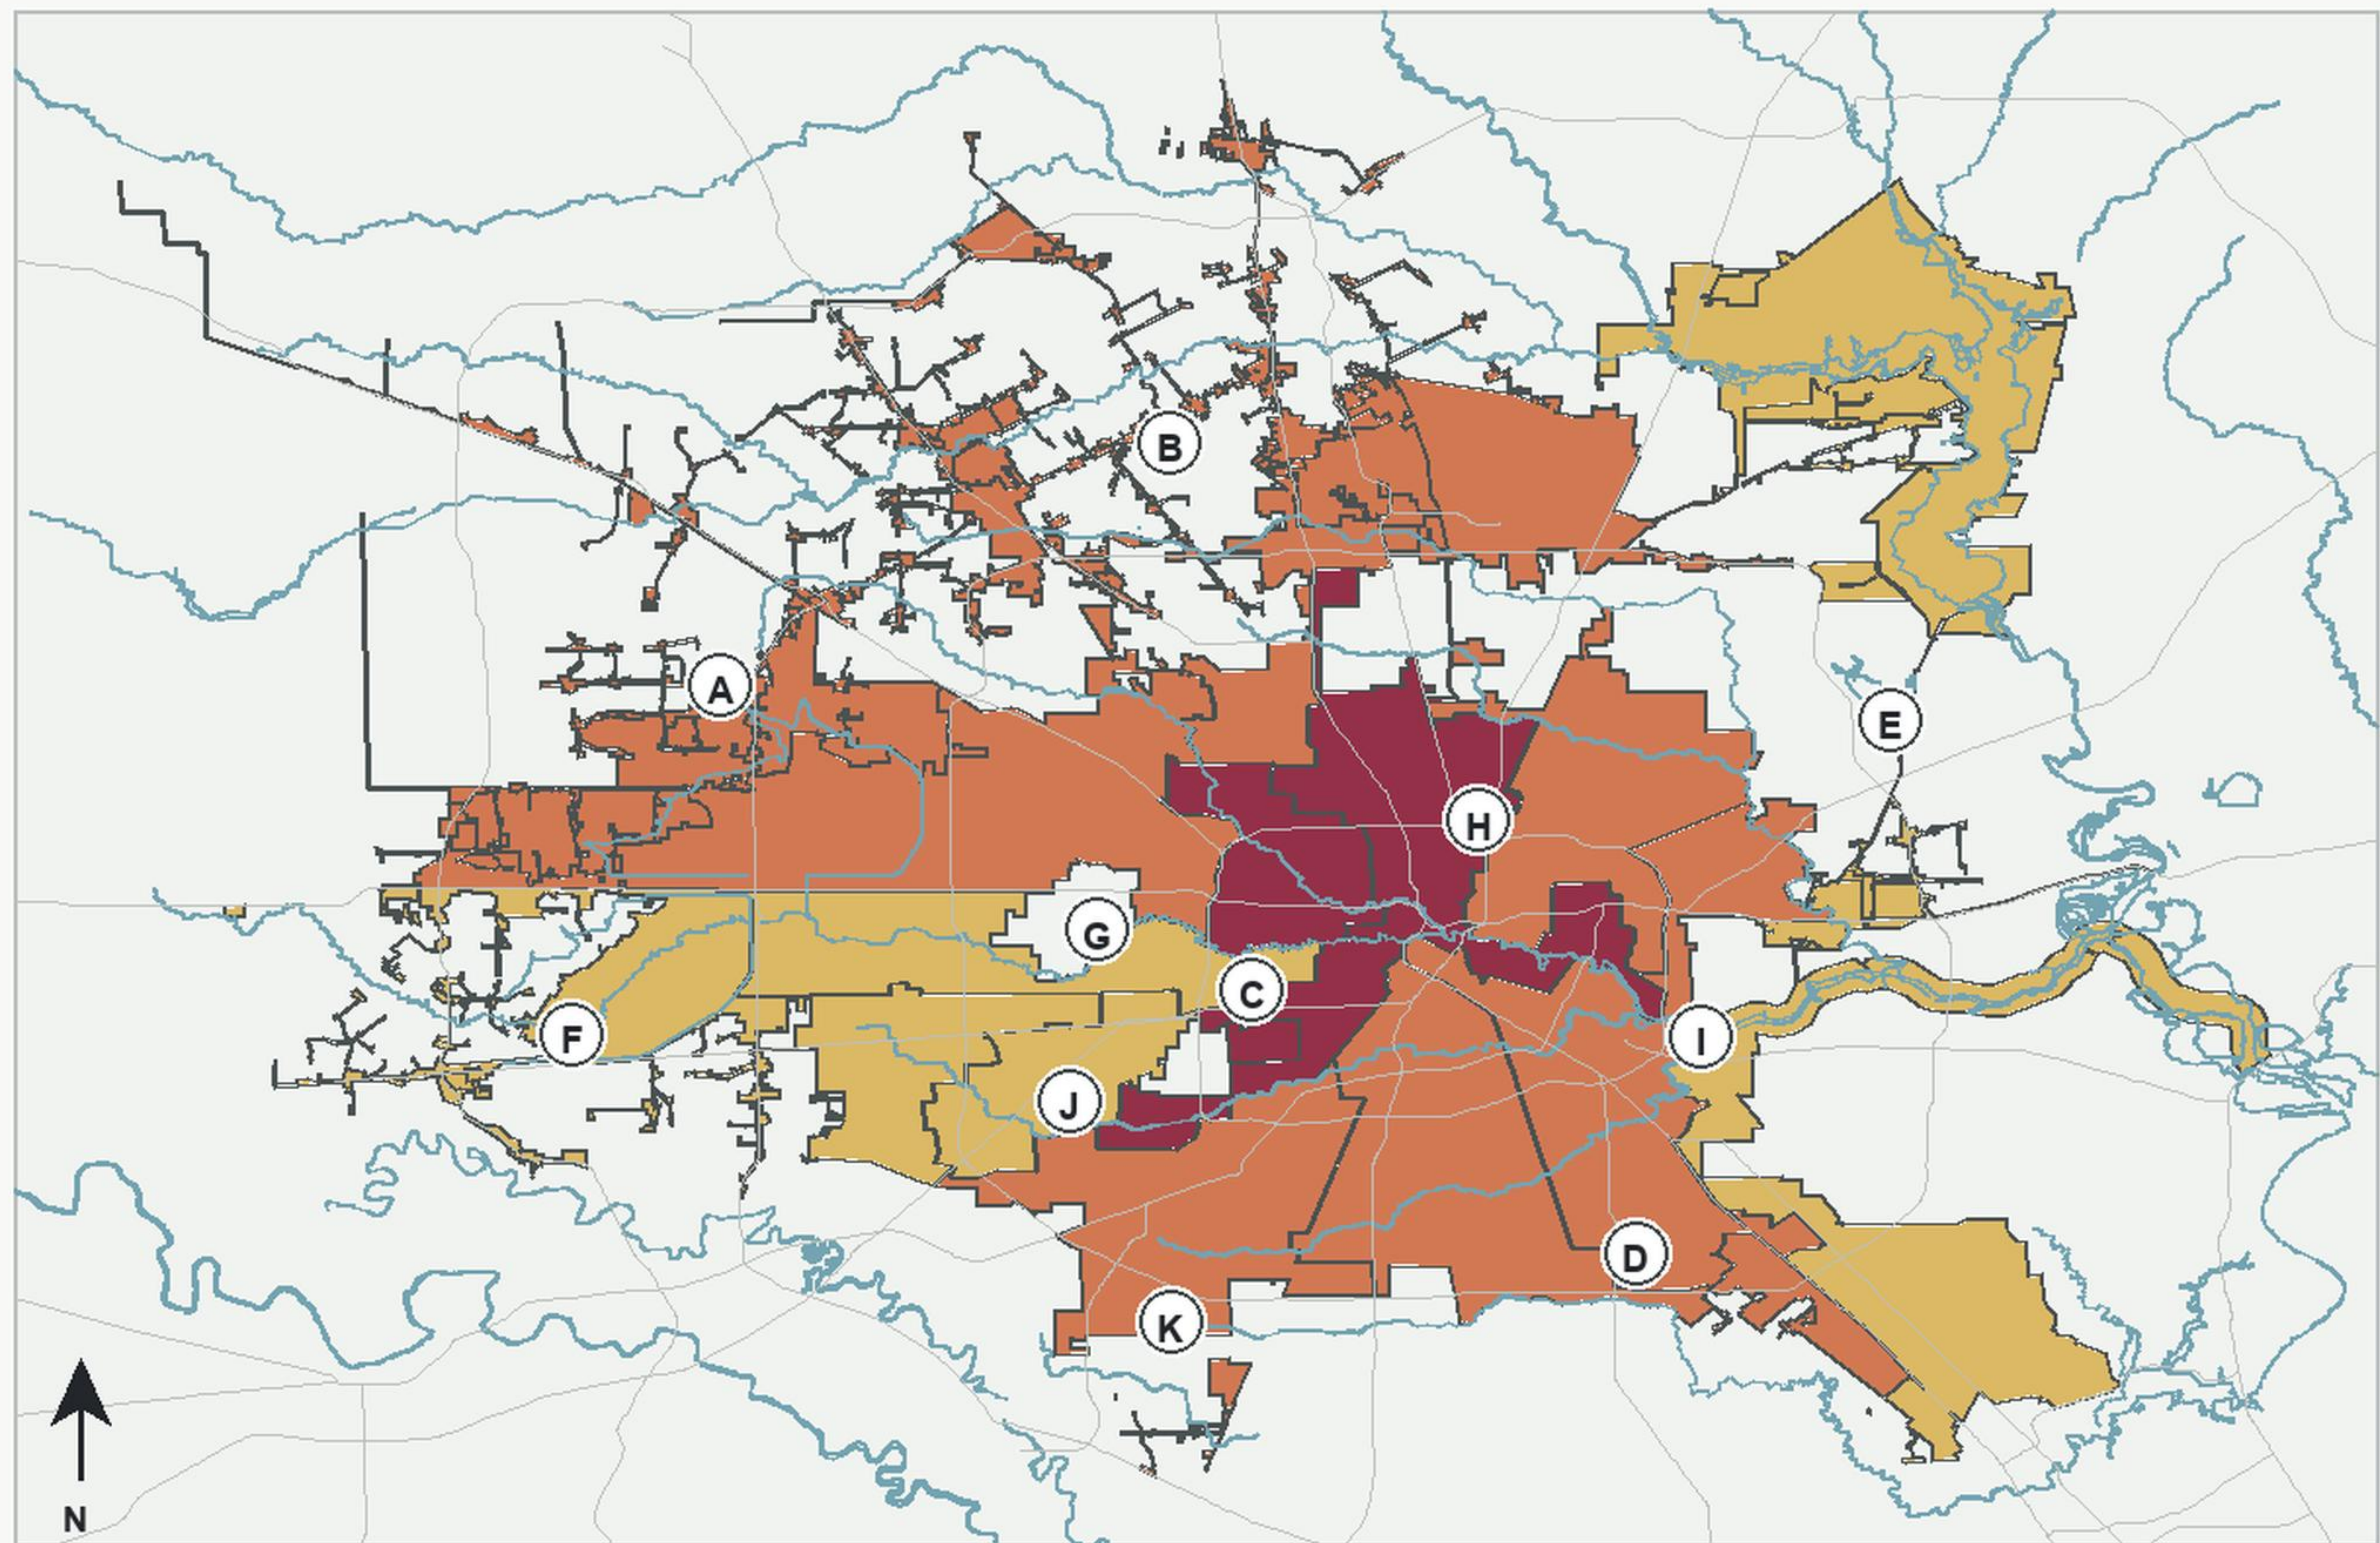

Component map for score interpretation; analytical screening output, not an official City metric.

Repeat-cluster share

Component maps explain which inputs drive the composite burden score. Quartiles are classified separately by component.

Houston 311 Infrastructure Service Burden

One-page static GIS brief | April-June 2025

Key Findings

- 82,743 cleaned infrastructure-related 311 records.
- Top burden district: C (80.5, Very High).
- Overall unresolved share: 15.5%.
- Overall repeat-cluster share: 42.0%.

Method Note

The score combines request-rate density, median resolution days, unresolved share, long-resolution share, and repeat-cluster share. ACS normalization is supported but awaits a valid Census API key.

Limitations

This is a public-data screening analysis, not an official City of Houston performance metric or a complete measure of infrastructure need.
